Jodh Singh Nahal

778-538-2351 | nahal.jodhsingh@gmail.com | linkedin.com/in/jodhsinghnahal | github.com/jodhsinghnahal

Education

University of British Columbia *Vancouver, BC*
Bachelor of Applied Science in Computer Engineering *Expected May 2028*
- Presidential Scholars Award ($60,000), Dean's Honour List, available 4 or 8 months, CGPA: 84.7%.

Technical Skills

CI/CD & Build: Jenkins, GitHub Actions, Docker, CMake, Cross-Compilation, Regression Pipelines
Languages: Python, Shell, C/C++, Perl, SQL
Tools: Linux/Unix, Git, Jira, Confluence, Sphinx, PlantUML

Experience

Hardware Verification Engineering Intern *Vancouver, BC*
AMD *Sept 2026 – Present*
- Building automation scripts and regression workflows to improve validation efficiency and coverage closure.
- Built an AI-driven browser automation tool that auto-provisions tool access and software installs for onboarding.
- Developing verification test cases and running regression testing.
- Contributing to verification of the IOHUB subsystem for next-generation AMD processor architectures.
- Verifying IOMMU L1 cache behavior using UVM in a constrained-random testbench.

Software Test / Embedded Development Co-op *Burnaby, BC*
Xantrex *May 2024 – Aug 2025*
- Reduced build times by 5× by implementing CI/CD cross-compilation pipelines with Docker, Jenkins, and CMake.
- Wrote Python scripts to autogenerate scalable C++ object-oriented code from SQLite and Microsoft Access/Excel data, eliminating manual boilerplate.
- Built Python Hardware-in-the-Loop (HIL) CAN and UART simulators to run 100+ verification tests on the Raspberry Pi gateway, validating edge cases and stress-testing real-time performance.
- Performed code reviews and system-level regression testing, reporting issues on Jira and Confluence.
- Created documentation using PlantUML and Sphinx, and presented the field release to the team and Product Managers.
- Developed an object-oriented, multi-threaded, non-blocking C++ firmware architecture on Linux-based Raspberry Pi gateways to parse RV-C CAN frames from STM32 devices and publish structured messages over MQTT.
- Replaced a ∼60k-line Python implementation with the C++ architecture.
- Achieved 7× device capacity, 90% lower CPU usage, and ∼2 s lower latency after the C++ migration.

Firmware / Embedded Systems Developer *Vancouver, BC*
UBC Rover *Sept 2023 – July 2026*
- Automated firmware validation with GitHub Actions CI and Catch2 unit tests to improve regression coverage.
- Led a team of 3 engineers building a distributed embedded control system across ESP32 (FreeRTOS), STM32, Arduino, and TI LaunchPad MCUs over SPI/I2C.

Undergraduate Research Assistant *Vancouver, BC*
UBC Electrical and Computer Engineering — Supervisor: Dr. Lutz Lampe *May 2026 – Sept 2026*
- Optimizing power extraction of piezoelectric energy harvesting interface circuits (SEH, SSHI, SECE) through LTspice and Simulink/Simscape simulation.
- Researching battery-less platforms for the Internet of Underwater Things via simulation of piezoelectric interface circuits.

Projects

OnlyVim | *Python, Linux, D-Bus, RPC*
- Developing a Linux daemon enabling global text editing with Neovim keybindings via keyboard remapping, D-Bus, and RPC interfaces.
- Designed low-latency event handling and Linux IPC for system-wide integration across applications.

Multimodal AI Messenger | *Node.js, Express, WebSocket, MongoDB, Gemini API*
- Built a concurrent full-stack messaging platform with Node.js, MongoDB, and WebSockets for real-time updates.
