Jodh Singh Nahal

778-538-2351 | nahal.jodhsingh@gmail.com | linkedin.com/in/jodhsinghnahal | github.com/jodhsinghnahal

Education

University of British Columbia *Vancouver, BC*
Bachelor of Applied Science in Computer Engineering *Expected May 2028*
- Presidential Scholars Award ($60,000), Dean's Honour List, available 4 or 8 months, CGPA: 84.7%.

Technical Skills

Languages: Python, Shell, C/C++, SQL, JavaScript
Infrastructure: Docker, Jenkins, Linux/Unix, CI/CD, Cross-Compilation, PythonAnywhere
Tools: Git, GitHub Actions, CMake, Jira, Confluence

Experience

Hardware Verification Engineering Intern *Vancouver, BC*
AMD *Sept 2026 – Present*
- Building automation scripts and regression workflows to improve validation efficiency and coverage closure.
- Built an AI-driven browser automation tool that auto-provisions tool access and software installs for onboarding.
- Contributing to verification of the IOHUB subsystem for next-generation AMD processor architectures.
- Verifying IOMMU L1 cache behavior using UVM in a constrained-random testbench.
- Expanded the constrained-random testbench to cover corner cases and improve functional coverage.

Software Test / Embedded Development Co-op *Burnaby, BC*
Xantrex *May 2024 – Aug 2025*
- Reduced build times by 5× by implementing CI/CD cross-compilation pipelines with Docker, Jenkins, and CMake.
- Developed an object-oriented, multi-threaded, non-blocking C++ firmware architecture on Linux-based Raspberry Pi gateways to parse RV-C CAN frames from STM32 devices and publish structured messages over MQTT.
- Created documentation using PlantUML and Sphinx, and presented the field release to the team and Product Managers.
- Replaced a ∼60k-line Python implementation with the C++ architecture.
- Achieved 7× device capacity, 90% lower CPU usage, and ∼2 s lower latency after the C++ migration.

Firmware / Embedded Systems Developer *Vancouver, BC*
UBC Rover *Sept 2023 – July 2026*
- Automated firmware validation with GitHub Actions CI and Catch2 unit tests to improve regression coverage.
- Led a team of 3 engineers building a distributed embedded control system across ESP32 (FreeRTOS), STM32, Arduino, and TI LaunchPad MCUs over SPI/I2C.
- Aggregated inputs from switches, buttons, potentiometers, encoders, and joysticks and streamed data over UART.
- Developed a 16-channel telemetry system on a TI C2000 (LAUNCHXL-F28069M) using ePWM-triggered ADC interrupts, streaming GPIO/ADC data over SCI/UART.

Undergraduate Research Assistant *Vancouver, BC*
UBC Electrical and Computer Engineering — Supervisor: Dr. Lutz Lampe *May 2026 – Sept 2026*
- Researching battery-less platforms for the Internet of Underwater Things via simulation of piezoelectric interface circuits.
- Optimizing power extraction of piezoelectric energy harvesting interface circuits (SEH, SSHI, SECE) through LTspice and Simulink/Simscape simulation.

Projects

BlindVision | *Flask, YOLOv8, OpenCV, Gemini API, JavaScript*
- Built a Python Flask/SQLite backend with RESTful endpoints and CRUD operations, and a JavaScript/HTML/CSS frontend deployed on PythonAnywhere.
- Developed a full-stack IoT web app giving visually impaired users real-time AI-powered audio descriptions of live video and audio.

Multimodal AI Messenger | *Node.js, Express, WebSocket, MongoDB, Gemini API*
- Built a concurrent full-stack messaging platform with Node.js, MongoDB, and WebSockets for real-time updates.
