Jodh Singh Nahal

778-538-2351 | nahal.jodhsingh@gmail.com | linkedin.com/in/jodhsinghnahal | github.com/jodhsinghnahal

Education

University of British Columbia *Vancouver, BC*
Bachelor of Applied Science in Computer Engineering *Expected May 2028*
- Presidential Scholars Award ($60,000), Dean's Honour List, available 4 or 8 months, CGPA: 84.7%.

Technical Skills

Languages: C/C++, Python, ARM Assembly, MIPS, Shell, SQL
Systems: Linux/Unix, Multi-threading, IPC, D-Bus, RTOS, Kernel Development, Virtual Memory
Tools: GDB, objdump, readelf, Git, Docker, Jenkins, CMake

Experience

Hardware Verification Engineering Intern *Vancouver, BC*
AMD *Sept 2026 – Present*
- Contributing to verification of the IOHUB subsystem for next-generation AMD processor architectures.
- Debugging RTL behavior through simulation and waveform analysis.
- Verifying IOMMU L1 cache behavior using UVM in a constrained-random testbench.
- Expanded the constrained-random testbench to cover corner cases and improve functional coverage.

Software Test / Embedded Development Co-op *Burnaby, BC*
Xantrex *May 2024 – Aug 2025*
- Developed an object-oriented, multi-threaded, non-blocking C++ firmware architecture on Linux-based Raspberry Pi gateways to parse RV-C CAN frames from STM32 devices and publish structured messages over MQTT.
- Achieved 7× device capacity, 90% lower CPU usage, and ∼2 s lower latency after the C++ migration.
- Replaced a ∼60k-line Python implementation with the C++ architecture.
- Reduced build times by 5× by implementing CI/CD cross-compilation pipelines with Docker, Jenkins, and CMake.

Firmware / Embedded Systems Developer *Vancouver, BC*
UBC Rover *Sept 2023 – July 2026*
- Developed Zephyr RTOS firmware on a Teensy 4.1 for stepper-based control of a 6-axis robotic arm.
- Led migration to a CAN-FD architecture using Moteus r4.11 controllers and BLDC motors for closed-loop torque control and higher bandwidth.
- Interfaced an Intel NUC (onboard PC) with SocketCAN and bridged data to ROS.
- Led a team of 3 engineers building a distributed embedded control system across ESP32 (FreeRTOS), STM32, Arduino, and TI LaunchPad MCUs over SPI/I2C.
- Aggregated inputs from switches, buttons, potentiometers, encoders, and joysticks and streamed data over UART.
- Developed a 16-channel telemetry system on a TI C2000 (LAUNCHXL-F28069M) using ePWM-triggered ADC interrupts, streaming GPIO/ADC data over SCI/UART.

Undergraduate Research Assistant *Vancouver, BC*
UBC Electrical and Computer Engineering — Supervisor: Dr. Lutz Lampe *May 2026 – Sept 2026*
- Optimizing power extraction of piezoelectric energy harvesting interface circuits (SEH, SSHI, SECE) through LTspice and Simulink/Simscape simulation.
- Researching battery-less platforms for the Internet of Underwater Things via simulation of piezoelectric interface circuits.
- Designing embedded power-management PCB hardware in KiCad integrating AC–DC rectifiers, transformers, and switching circuitry.

Projects

OS161 Kernel Development | *C, GDB, MIPS, Operating Systems*
- Engineered thread synchronization primitives, including blocking locks and condition variables, to resolve race conditions in kernel space.
- Implemented system calls including fork, execv, and file I/O.

Memory Allocator Implementation | *C, Pointers, Systems Programming*
- Developed a custom malloc, free, and realloc using an implicit free list with 8-byte alignment and block headers.
