Education

University of British Columbia *Vancouver, BC*
Bachelor of Applied Science in Computer Engineering *Expected May 2028*
- Presidential Scholars Award ($60,000), Dean's Honour List, available 4 or 8 months, CGPA: 84.7%.

Technical Skills

Languages: SQL, Python, MATLAB, JavaScript, C/C++
Data Tools: SQLite, Microsoft Access, Excel, NumPy, MATLAB & Simulink
Tools: Git, Linux, Jira, Confluence, Sphinx

Experience

Hardware Verification Engineering Intern *Vancouver, BC*
AMD *Sept 2026 – Present*
- Building automation scripts and regression workflows to improve validation efficiency and coverage closure.
- Contributing to verification of the IOHUB subsystem for next-generation AMD processor architectures.
- Verifying IOMMU L1 cache behavior using UVM in a constrained-random testbench.
- Expanded the constrained-random testbench to cover corner cases and improve functional coverage.

Software Test / Embedded Development Co-op *Burnaby, BC*
Xantrex *May 2024 – Aug 2025*
- Wrote Python scripts to autogenerate scalable C++ object-oriented code from SQLite and Microsoft Access/Excel data, eliminating manual boilerplate.
- Achieved 7× device capacity, 90% lower CPU usage, and ∼2 s lower latency after the C++ migration.
- Created documentation using PlantUML and Sphinx, and presented the field release to the team and Product Managers.
- Performed code reviews and system-level regression testing, reporting issues on Jira and Confluence.
- Developed an object-oriented, multi-threaded, non-blocking C++ firmware architecture on Linux-based Raspberry Pi gateways to parse RV-C CAN frames from STM32 devices and publish structured messages over MQTT.
- Replaced a ∼60k-line Python implementation with the C++ architecture.

Firmware / Embedded Systems Developer *Vancouver, BC*
UBC Rover *Sept 2023 – July 2026*
- Led a team of 3 engineers building a distributed embedded control system across ESP32 (FreeRTOS), STM32, Arduino, and TI LaunchPad MCUs over SPI/I2C.
- Aggregated inputs from switches, buttons, potentiometers, encoders, and joysticks and streamed data over UART.

Undergraduate Research Assistant *Vancouver, BC*
UBC Electrical and Computer Engineering — Supervisor: Dr. Lutz Lampe *May 2026 – Sept 2026*
- Modeling nonlinear SSHI interface circuits and verifying simulated voltage waveforms against theoretical models.
- Optimizing power extraction of piezoelectric energy harvesting interface circuits (SEH, SSHI, SECE) through LTspice and Simulink/Simscape simulation.
- Researching battery-less platforms for the Internet of Underwater Things via simulation of piezoelectric interface circuits.
- Designing embedded power-management PCB hardware in KiCad integrating AC–DC rectifiers, transformers, and switching circuitry.

Projects

Adversarial Robustness Evaluation | *PyTorch, CNN, Computer Vision*
- Authored tools to visualize adversarial noise and its impact on decision boundaries.
- Built a modular attack framework with configurable hyperparameters to analyze perturbation level versus Attack Success Rate (ASR).

Behaviour Cloning for Robotic Control | *PyTorch, MuJoCo, NumPy, dm_control*
- Built an end-to-end pipeline with PyGame to collect, filter, and structure human-guided interaction data for training in dm_control.
