Jodh Singh Nahal

778-538-2351 | nahal.jodhsingh@gmail.com | linkedin.com/in/jodhsinghnahal | github.com/jodhsinghnahal

Education

University of British Columbia *Vancouver, BC*
Bachelor of Applied Science in Computer Engineering *Expected May 2028*
- Presidential Scholars Award ($60,000), Dean's Honour List, available 4 or 8 months, CGPA: 84.7%.

Technical Skills

Languages: Python, MATLAB & Simulink, C/C++, SQL
Math & Modeling: NumPy, PyTorch, LTspice, Simulink/Simscape, Waveform Analysis
Tools: Linux, Git, Docker

Experience

Hardware Verification Engineering Intern *Vancouver, BC*
AMD *Sept 2026 – Present*
- Writing SystemVerilog Assertions (SVA) to cross-check legal responses across IPs.
- Contributing to verification of the IOHUB subsystem for next-generation AMD processor architectures.
- Verifying IOMMU L1 cache behavior using UVM in a constrained-random testbench.
- Expanded the constrained-random testbench to cover corner cases and improve functional coverage.

Software Test / Embedded Development Co-op *Burnaby, BC*
Xantrex *May 2024 – Aug 2025*
- Achieved 7× device capacity, 90% lower CPU usage, and ∼2 s lower latency after the C++ migration.
- Wrote Python scripts to autogenerate scalable C++ object-oriented code from SQLite and Microsoft Access/Excel data, eliminating manual boilerplate.
- Developed an object-oriented, multi-threaded, non-blocking C++ firmware architecture on Linux-based Raspberry Pi gateways to parse RV-C CAN frames from STM32 devices and publish structured messages over MQTT.
- Replaced a ∼60k-line Python implementation with the C++ architecture.
- Profiled the C++ firmware to eliminate performance bottlenecks.

Firmware / Embedded Systems Developer *Vancouver, BC*
UBC Rover *Sept 2023 – July 2026*
- Led a team of 3 engineers building a distributed embedded control system across ESP32 (FreeRTOS), STM32, Arduino, and TI LaunchPad MCUs over SPI/I2C.
- Aggregated inputs from switches, buttons, potentiometers, encoders, and joysticks and streamed data over UART.
- Developed a 16-channel telemetry system on a TI C2000 (LAUNCHXL-F28069M) using ePWM-triggered ADC interrupts, streaming GPIO/ADC data over SCI/UART.
- Debugged C2000 firmware over JTAG in CCSTUDIO.

Undergraduate Research Assistant *Vancouver, BC*
UBC Electrical and Computer Engineering — Supervisor: Dr. Lutz Lampe *May 2026 – Sept 2026*
- Modeling nonlinear SSHI interface circuits and verifying simulated voltage waveforms against theoretical models.
- Optimizing power extraction of piezoelectric energy harvesting interface circuits (SEH, SSHI, SECE) through LTspice and Simulink/Simscape simulation.
- Researching battery-less platforms for the Internet of Underwater Things via simulation of piezoelectric interface circuits.
- Designing embedded power-management PCB hardware in KiCad integrating AC–DC rectifiers, transformers, and switching circuitry.

Projects

Adversarial Robustness Evaluation | *PyTorch, CNN, Computer Vision*
- Built a modular attack framework with configurable hyperparameters to analyze perturbation level versus Attack Success Rate (ASR).
- Implemented FGSM and PGD adversarial attack pipelines in PyTorch to evaluate VGG-16 robustness.

Behaviour Cloning for Robotic Control | *PyTorch, MuJoCo, NumPy, dm_control*
- Improved reaching precision with a custom distance-weighted loss function.
